## REACH-CONFIRMATION

As a manufacturer of release agents and cleaners Chem-Trend is directly affected by the EEC REACH regulations. As an importer and downstream-user of chemical substances, which we are using as raw materials in our release agent preparations, we need to ensure that they will be available to us in the future.

At the end of the pre-registration phase we confirm that according to our current information the release agent preparations supplied to you do comply with REACH requirements.

All components of these preparations are either

- a) pre-registered by Chem-Trend ( taking the role of the importer)
- b) pre-registered as confirmed by our suppliers ( taking the role of the manufacturer/ importer/ only representative) or
- c) are exempt by REACH regulations ( i.e. volume < 1 to / y).

Our products are therefore within the time limits given by REACH provisionally fully marketable in the EU.

REACH compliance of our release agent preparations is independent of the different pre-registration numbers of substances contained in them. The simple reason is that not all of them need to be pre-registered because they are either phase-in substances or manufactured or imported below 1 tonne per year or they are exempt from REACH. Therefore we will not communicate the pre-registration numbers in the supply chain.

Our products do not contain any Substances of Very High Concern (acc. to ECHA candidate list 29.10.2008). Information about hazardous substances will be given in our Material Safety Data Sheets.

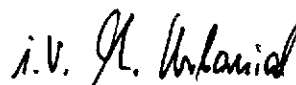

Feel free to contact us ([mcm@chemtrend.de](mailto:mcm@chemtrend.de) ) directly if you need further information concerning the REACH-compliance of our products.

Yours sincerely

CHEM-TREND (Deutschland) GmbH

ppa. Dr. Uwe Kaiser  
(Qualitätsmanager)
